

Family Owned Since 1984

Putting Your Property First Since 1984

At Buckeye EcoCare, we are often asked about the safety and effects of the products we use on your lawn and landscape areas. The answer is easy - the plant health care products we use every day are delivered by licensed technicians who are trained, experienced professionals. All of the plant foods and pesticides that are delivered to your lawn and landscape have gone through rigorous testing by highly trained chemists and formulators. "EcoCare" in our name means that we are constantly tweaking our products and service delivery systems so that our clients can enjoy the green spaces around their homes.

Since 1984 when my father founded this company, it has been our vision and mission to keep Buckeye EcoCare customers our number one focus. If we have fallen short of your expectations, a simple phone call to one of our offices will prompt a FREE service call to your property! This has been our policy since the very beginning and will continue to be my promise to you as a valued customer.

Act Now for a Healthier Lawn Next Year!

Every lawn can benefit from periodic renovation. Summer heat, disease, insects and heavy foot traffic can take their toll, while soil naturally becomes compacted over time. When that happens, your lawn may struggle to recover from thin, brown or worn areas – and the cycle of weak turf and compacted soil can continue.

Core aeration is an effective way to help restore healthier growing conditions and give your lawn the support it needs to thrive.

CORE AERATION: ROOM FOR GROWTH

Aeration is one of the best services you can provide for your lawn. The process creates thousands of small openings throughout the turf, relieving soil compaction and helping break down excess thatch.

During aeration, a machine called a core aerator removes small plugs of soil and thatch from the lawn. These cores naturally break down and return valuable organic material to the soil surface.

By opening up the soil, core aeration creates more room for roots to grow and allows water, air and nutrients to move more easily into the root zone. This helps your turf build a stronger foundation for healthier growth.

GIVE YOUR LAWN THE ADVANTAGE

Compacted soil can limit root development and make it harder for your lawn to absorb the moisture and nutrients it needs. Aeration helps relieve that pressure, improving the lawn's ability to recover from seasonal stress and maintain a fuller, more resilient appearance.

We can aerate well into the fall, making this an ideal time to invest in your lawn's long-term health. Contact us today to schedule your core aeration service and give your turf the room it needs to grow stronger next season.

Trees Need to Eat Too!

Like any living thing, trees need nutrients. Fertilizing trees provides the nutrients they need to fight off pests, disease, and environmental stresses. While fertilizer can't solve all of a tree's problems, it will go a long way toward giving it a fighting chance.

The objective of fertilization is to put the nutrients where they will best be taken up by the tree's roots, which extend well beyond the outer reach of a tree's branches.

Fall is a great time to fertilize your trees and shrubs. During the fall, your trees don't expend much energy creating top growth. Instead, trees' roots apply nutrients to important health-promoting functions such as root development and disease resistance. Giving your trees and shrubs a good feeding in the fall will help them expand their root systems and will lead to healthier growth in the spring.

Working Together For A Better Environment

Of all the environmental issues we can get involved in, one of the most personal and closest to home involves the lawn, trees and shrubs growing in our own yards.

Plants contribute to our health and comfort while improving the environment. They produce oxygen, filter impurities from the air, reduce the demand for cooling in the summer, act as windbreaks and insulators in the winter, and even filter pollutants from surface water. Plants also help to reduce global warming and noise pollution.

Taking good care of your property improves the quality of life for your family, your neighbors and the whole community. At Buckeye EcoCare, we're committed to working with you to enhance both your property and the environment we all share.
